MODULE

PROGRESS

	<h3>Intro to Academy</h3> <p>8 Sections Fundamental General</p> <p>Your first stop in Hack The Box Academy to become acquainted with the platform, its features, and its learning process.</p>	100% Completed
	<h3>Linux Fundamentals</h3> <p>30 Sections Fundamental General</p> <p>This module covers the fundamentals required to work comfortably with the Linux operating system and shell.</p>	100% Completed
	<h3>Introduction to Bash Scripting</h3> <p>10 Sections Easy General</p> <p>This module covers the basics needed for working with Bash scripts to automate tasks on Linux systems. A strong grasp of Bash is a fundamental skill for anyone working in a technical information security role. Through the power of automation, we can unlock the Linux operating system's full potential and efficiently perform habitual tasks.</p>	100% Completed
	<h3>Web Requests</h3> <p>8 Sections Fundamental General</p> <p>This module introduces the topic of HTTP web requests and how different web applications utilize them to communicate with their backends.</p>	100% Completed
	<h3>Introduction to Networking</h3> <p>21 Sections Fundamental General</p> <p>As an information security professional, a firm grasp of networking fundamentals and the required components is necessary. Without a strong foundation in networking, it will be tough to progress in any area of information security. Understanding how a network is structured and how the communication between the individual hosts and servers takes place using the various protocols allows us to understand the entire network structure and its network traffic in detail and how different communication standards are handled. This knowledge is essential to create our tools and to interact with the protocols.</p>	100% Completed
	<h3>Windows Fundamentals</h3> <p>14 Sections Fundamental General</p> <p>This module covers the fundamentals required to work comfortably with the Windows operating system.</p>	100% Completed

Security Monitoring & SIEM Fundamentals

11 Sections Easy Defensive

This module provides a concise yet comprehensive overview of Security Information and Event Management (SIEM) and the Elastic Stack. It demystifies the essential workings of a Security Operation Center (SOC), explores the application of the MITRE ATT&CK framework within SOCs, and introduces SIEM (KQL) query development. With a focus on practical skills, students will learn how to develop SIEM use cases and visualizations using the Elastic Stack.

100% Completed

Network Foundations

12 Sections Fundamental General

This course introduces the basic concepts essential to understanding the world of networking. Students will learn about various network types such as LANs and WANs, discuss fundamental networking principles including the OSI and TCP/IP models, and explore key network components like routers and servers. The course also covers important topics such as IP addressing, network security, and internet architecture, providing a comprehensive overview of networking that is crucial for any IT professional.

100% Completed

Introduction to Information Security

24 Sections Fundamental General

This theoretical module provides a comprehensive introduction to the foundational components of information security, focusing on the structure and operation of effective InfoSec frameworks. It explores the theoretical roles of security applications across networks, software, mobile devices, cloud environments, and operational systems, emphasizing their importance in protecting organizational assets. Students will gain an understanding of common threats, including malware and advanced persistent threats (APTs), alongside strategies for mitigating these risks. The module also introduces the roles and responsibilities of security teams and InfoSec professionals, equipping students with the confidence to advance their knowledge and explore specialized areas within the field.

100% Completed

Introduction to Penetration Testing

21 Sections Fundamental Offensive

In this module, we will get into the fundamentals of penetration testing, a critical aspect of cybersecurity theory that explains how professionals in the field operate and underscores the significance of penetration testing within cybersecurity practices.
